Rob Laine stacks up against confined space

Sales Engineer Bob Womersley (VIC)

Due to the demands from developers to maximise 'lettable space' in new building projects, contractors often find the available space is insufficient for a pair of pumps, and for access to carry out maintenance.

Rob Laine Pumping Solutions has often been approached with the question, "Can you package the pump units to enable them to be located in a confined space?"

The answer is yes. Rob Laine has developed a novel package to reduce the space required for a pair of pumps.

The Rob Laine 'stackable' pump package has been produced in several configurations to suit the available space, with or without pipe work and valves.

Combinations such as end-suction, multistage, diesel/electric and diesel/diesel, complete with suction and discharge manifolds, test lines, jacking pumps and pressure switch assemblies can be incorporated.

For further information, contact Rob Laine Pumping Solutions: 03 9706 6525.
